

# ULTI-VISION

## Demonstration and Training showroom/classroom

Ultimizers is dedicating a portion of our factory to a “Demonstration” and “Training” area, for the purposes of showing the scanners to prospective customers, training of new customers, and on-going training of existing customers. This capability includes three different scanners that customers can operate with our help and training, at any arranged time to suit mutual schedules. These three scanners are:

**The “Lateral” scanner**, that scans a stopped board by taking a snapshot of the entire board, with multiple ‘frame grabbing’ cameras, to produce solutions for ripping in fixed/moving blades rip saw(s).

*A “Lateral” scanner for wide boards for ripping.*

**The “Lineal” wide board scanner**, that scans a moving board as it travels lengthways thru the scan zone, by using ‘line scan’ cameras and lasers to produce solutions for ripping in fixed/moving blades rip saw(s).

*A workstation computer and the wide board “Lineal” scanner.*

*The “Lineal” wide board scanner, and the feed conveyer.*

**A “Lineal” scanner for narrow boards.** This scanner, like the wide board scanner, scans the board with line scan cameras as the board progresses lengthways thru the scan zone. The narrow board version is typically used for crosscut solutions ahead of automatic crosscut saws.

*The “Lineal” scanner for narrow boards.*

The above three scanners are real working scanners, producing ripping and/or crosscutting solutions that customers can see and evaluate. Customers can bring their own wood, and scan to see the results. Customers can spend a few hours, or several days, depending on their interest levels and time available.

- Brief tours/demonstrations by our staff are at no-charge.
- Detailed demonstrations on customer’s wood may require support of technicians, which can be quoted in advance.
- Classroom training on the computers, scanners, etc., is on a charge basis, and can be scheduled and quoted in advance.

We invite any interested parties to contact us for a demonstration, and please drop by if you are in the area as most times we will have someone available for a brief tour.
